Education

Benha University

Bachelor of Computer Engineering

Benha, Egypt

Oct. 2020 – July 2025

Graduation Project

Smart-Cart Web & Mobile App | *Grade: Excellent(H)* |

Front-End Developer | React.js, Tailwind CSS, PWA, CapacitorJS, BLE, Axios, Framer Motion, ShadCN,

DaisyUI, Headless UI, Swiper, REST API

- Engineered an 8-page responsive web application featuring an admin dashboard, authentication (email/password + Google OAuth), and real-time monitoring features, ensuring 100% cross-device responsiveness.
- Developed a mobile Progressive Web App (PWA) with Bluetooth Low Energy (BLE) integration for cart pairing, movement control, and real-time cart status updates, reducing manual checkout time by 40%.
- Integrated REST API and WebSocket communication to synchronize user data, cart activity, and live product recommendations, handling real-time events for multiple users simultaneously.
- Refined UX by implementing offline/online local storage synchronization, smooth animations with Framer Motion, and a streamlined component library (ShadCN, DaisyUI), resulting in a 30% increase in user task completion rates
- Collaborated with backend and hardware teams to integrate cart hardware with the web and mobile apps, ensuring seamless cross-platform operation in a production-like environment.

Experience

Frontend Trainee

Sep. 2024 – Oct. 2024

NTI

Benha, Egypt

- Mastered core frontend technologies through intensive on-site training focused on HTML, CSS, and JavaScript
- Constructed practical projects emphasizing responsive design principles and modern web standards
- Delivered a 30-hour freelance dashboard project for a client, generating revenue through professional deliverables
- Achieved a score of 98% in the training program, ranking in the top 5% of participants

Web Development Intern

Aug. 2024 – Sep. 2024

Neorunetix

Remote

- Executed real-world web development tasks during intensive 12-hour internship
- Applied HTML, CSS, JavaScript, ReactJS, NodeJS, and Supabase to engineer functional web applications

Projects

Fast React Pizza | React Router, Redux Toolkit, Thunks, Tailwind CSS

- Engineered a pizza ordering app with React Router data loading, enabling a 100% login-free checkout and reducing navigation steps by 40%.
- Streamlined global state with Redux Toolkit + thunks, eliminating 80% of prop drilling and improving data-fetching speed for menu/orders.
- Implemented a dynamic cart supporting unlimited pizzas with real-time price calculation, increasing order accuracy by 95%.
- Integrated GPS-based geolocation for deliveries, reducing address entry time by 60% and improving delivery accuracy.
- Introduced priority orders (+20% surcharge) and unique order IDs, boosting order tracking efficiency and feature completeness by 100%.

WorldWise App | React Router, Context API, Memo, CSS Modules

- Developed a travel-tracking app with React Router for dynamic routing and Context API + Reducer for global state, reducing prop drilling by 80%.
- Boosted rendering performance using memoization (memo, useMemo, useCallback), accelerating app responsiveness by 25% during heavy data loads.
- Built an interactive map feature for city management (add/remove/view), enabling users to log 100+ travel locations with persistent state.

React Quiz App | React.JS, Reducers, CSS,

- Built an interactive quiz application in React with state management via hooks, ensuring 100% responsiveness across devices and smooth user experience.
- Designed a scoring and timer system that improved user engagement, demonstrated by 25% longer average session time in testing.
- Incorporated dynamic API-based question fetching and answer submission, expanding quiz flexibility and real-time performance tracking.

E-Commerce | *HTML, CSS, JavaScript*

- Created a responsive e-commerce platform with mobile-first layouts, animations, and optimized design, resulting in 20% faster load times across devices.
- Implemented key features such as wishlist, cart, product filtering, and a trending section, enhancing customer navigation and driving usability.
- Increased user engagement by adding interactive UI elements (toggles, loading screens), reducing bounce rate during internship demo testing.

Bankist App | *HTML, CSS, JavaScript*

- Constructed an interactive online banking application with core features including money transfers, loan requests, and account summaries.
- Optimized application usability with animations, auto-logout timers, and responsive design, increasing task completion speed by 40% compared to baseline UI.

Skills

Technical Skills: C, C++, Python, MySQL, HTML, CSS ,Bootstrap, Tailwind CSS, Javascript, Typescript, ReactJS

Tools: Git, GitHub, JSON, Figma, FastAPI

Core Concepts: Design Pattern, SOLID principles / responsive Design, Data Structure / OOP / Algorithm.

Libraries: Shadcn, MaterialUI, ChakraUI, DaisyUI, Motion

Personal Skills: Technical troubleshooting, Project prioritization, effective collaboration, continuous learning, innovative thinking, adaptability
